Friday:	Time varies	Saturday:	
Sunday:		Emergency Contact 24 Hour Phone Number: (414) 963-9810	

**Program Description**

A core service offered is a mental health assessment. The evaluation responds to the request for diagnostic information and psychometric data. As a general practice, the assessment includes the evaluation of **emotional, mental health**; learning disability, cognitive, academic achievement; and adaptive, functional estimates, and vocational functioning.

• **Emotional, Mental Health Functioning**

The emotional functioning evaluation addresses the mental status functioning of the client as related to the ability to think, reason, and remember (cognitive functioning). The evaluation of emotional functioning identifies emotional pathologies in the form of a Diagnostic and Statistical Manual (DSM-IV) diagnosis. A clear and appropriate diagnosis is used as a developmental foundation to assist the client, and the client's Employment Planner in providing appropriate services. An emotional functioning assessment involves qualitative and quantitative approaches. These approaches include the use of instruments such as the Clinical Diagnostic, Mental Status Evaluation, and may include objective tests such as the Miskimins Self Concept Inventory, and

the Minnesota Multiphasic Personality Inventory. When appropriate, projective tests such as the HFD, the Kinetic FD, the Thematic Apperception Test, and the Rorschach, may be used.
